

New England Botanical Club

The New England Botanical Club (NEBC), organized in 1895, is a non-profit organization that promotes the study of plants of North America, especially the flora of New England and adjacent areas.

NEBC publishes the peer-reviewed scientific journal, *Rhodora*, as well as a range of special publications and regional floras. NEBC holds monthly meetings during the academic year, maintains vascular and non-vascular herbaria, and provides a small library based at Harvard University. NEBC annually offers research grants and confers the Fernald publication award.

Peer reviewed journal
published since 1899.

CONTENTS

The Massachusetts State Cabinet Herbarium revisited and revitalized: A collection of New England plants from the early 19th century. <i>Rebecca L. Bernardos, Karen B. Searcy, C. Roberta Lombardi, and Tristram Seidler</i>	409
Bryophytes of Martha's Vineyard and Nomans Land, Massachusetts, USA. <i>Norton G. Miller and Sean C. Robinson</i>	431
The lichens of Prince Edward Island, Canada: A second checklist, with species ranked for conservation status. <i>Richard Troy McMullin</i>	454
NEW ENGLAND NOTE	
Newly documented non-native plant species for New Hampshire. <i>William F. Nichols and Virginia C. Nichols</i>	485
NOTES	
<i>Platanthera hyperborea</i> (Orchidaceae) – only selfing? <i>Matthias Kropp</i>	490
European frogbit (<i>Hydrocharis morsus-ranae</i>) in the Champlain/Adirondack region: Recent inferences. <i>Christopher T. Martine, Stephen F. Langdon, Timothy M. Shearman, Casey Binggeli, and Timothy B. Mihuc</i>	499
THE BOTANISTS' CORNER	
Natural reproduction of <i>Quercus acutissima</i> (Fagaceae) in Tennessee. <i>Brian A. Chandler and Roger D. Applegate</i>	505
CONFERENCE REPORTS	
NEBC 120th Anniversary Botanical Research Conference Presentations	507
NEBC MEETING NEWS	542
Reviewers of Manuscripts	545

New England Botanical Club

Meetings

Our monthly meetings are open to the public and feature presentations by esteemed professionals and distinguished botanists. Presentation material is wide ranging, including topics such as hybridization, taxonomy, conservation of rare plant species and their habitats, botanical education, invasive species, seed banking, and more. Presentations are not merely limited to flowering plants, but address mosses, algae, lichens, and fungi, as well as community ecology, ecosystem dynamics, and the like within the region and afar. For those who cannot attend meetings, we videotape and post the presentations to our website.

Field Trips and Away Meetings

NEBC members often gather for field trips in places of botanical interest throughout New England and beyond. Once or twice a year, we schedule a weekend-long "away meeting" which includes field excursions, informal workshops, communal meals, an evening speaker, and more.

Herbaria

The NEBC herbaria are the largest collections for New England. NEBC's vascular herbarium contains more than 258,000 sheets and both the vascular and non-vascular collections are housed with the holdings of the Harvard University Herbaria located at 22 Divinity Avenue, Cambridge, MA. NEBC welcomes herbaria volunteers.

Publications

Membership includes current print copies of *Rhodora* (4 issues annually) and online access to archived issues. Our peer-reviewed journal is devoted primarily to the botany of North America and accepts scientific papers and notes relating to the systematics, floristics, ecology, paleobotany, or conservation biology of this or floristically related regions. NEBC also issues special publications, longer works with the same breadth of topics.

Grants and Education

NEBC offers funding and learning opportunities for students and anyone interested in plants, in addition to supporting research projects with financial grants.

For more information about NEBC, including our current schedule of events and how to join, please visit our website:
